Teaching Strategies - How to Use Flash Cards

Flash Cards are an excellent resource for helping students to learn and instantly recognize the ten frame patterns for numbers 0 to 10.

By flashing the cards daily and asking students to call out the numbers shown or a number fact about the number displayed, students will build instant recall and instant recognition of what is represented on the card.

Ideas for use:

- Hold the stack of cards, facing the students, in one hand and once used, place each card to the back of the stack. Repeat often.

- Have students call out the number shown on the card.
