- Have
  - ◊ e.g. [5
  - ◊ Older

Flashcards without answers:

- Have all students say each number fact as it is shown **with** the answer.
- Have individual students respond with the answer. Make it a speed test .
- Have two or three students race to be the first to respond with the correct answer.
- Have a student give a related division fact
  - ◊ e.g. [5 x 5 = 25] related division fact: "25 ÷ 5 = 5"
  - ◊ Older students may like to be challenged with associated squared fact such as $5^2 = 25$
- Have students tell stories about the multiplication fact e.g. "Five children ate 5 jelly beans each. How many jelly beans altogether?" "A farmer planted eight rows of 8 bushes. How \bushes are planted altogether?" Encourage students to use sensible examples. Large numbers will need different stories. For example a child could not eat 12 hot dogs.
- For a challenge, ask questions like, "I am thinking of a number. If I divide 36 by this number the answer is the same number. What number is it?" or "I multiply 5 by itself, what number will I get?" or "What do I do to 36 to get 6?"

$$0 \times 0 = 0$$

www.profpete.com

$$1 \times 1 = 1$$

2 x 2 = 4

3 x 3 = 9
