Developing Fluency Worksheets Series

Grade 1 / Year 2

Four eBooks:

- Addition & Subtraction to 10
- Addition
- Subtraction
- Addition & Subtraction Revision

Grade 2 / Year 3

Four eBooks:

- Addition
- Subtraction
- Addition & Subtraction Revision
- Easy Multiplication & Division

Grade 3 / Year 4

Four eBooks:

- Extended Addition & Subtraction
- Multiplication
- Division
- Multiplication & Division Revision

Grade 4 / Year 5

Four eBooks:

- All Operations Revision
- Extended Multiplication & Division
- Division with Remainders
- Factors & Multiples

Grade 5 / Year 6

Four eBooks:

- Mental Strategies
- All Operations Advanced Revision
- Fractions
- Percentages

Grade 2 / Year 3 eBooks series: 10 Minutes a Day Level 1

Each worksheets eBook contains:

- * Daily worksheets for 10 weeks
- * Carefully graded and sequenced activities
- * Lots of revision activities
- * 5 Checkup worksheets for assessment
- * 20 Homework worksheets with parents' advice
- * All answer keys
- * PDF download for easy access
- * Teaching strategies advice
- * 30-day money-back guarantee

Addition:

- Count on 1
- Count on 2
- Count on 3
- Rainbow facts
- Special cases (+0, +10)
- Doubles
- Doubles +1
- Near 10 (+9)
- Near 10 (+8)
- Remaining facts (7+4, 7+5)
- Revision

Subtraction:

- Count back 1
- Count back 2
- Count back 3
- Rainbow facts
- Take away 0, 10
- Halving
- Double +1
- Near 10 (-9)
- Near 10 (-8)
- Remaining facts
- Revision

Addition & Subtraction Revision:

- Count on 1, 2 & 3
- Count back 1, 2 & 3
- Difference of 1, 2 & 3
- Rainbow facts
- Double/Halve
- Double +1
- Near Ten (+8, +9)
- Remaining facts
- Revision

Easy Multiplication & Division:

- Double (2x)
- Place value (5x, 10x)
- Double + one more set (3x)
- Halving ($\div 2$)
- Place value ($\div 10$)
- Relate to 5x ($\div 5$)
- Think of 3x ($\div 3$)
- X Revision- $\div$ Revision
- All x $\div$ Revision

Answer

Alignment with the Common Core State Standards for Mathematics

Common Core State Standards for Mathematics	Recommended eBook match	Description
Grade 2 Operations & Algebraic Thinking Add and subtract within 20 - Fluently add and subtract within 20 using mental strategies. - By end of Grade 2, know from memory all sums of two one-digit numbers. Work with equal groups of objects to gain foundations for multiplication.	 Ten Minutes a Day Level 1: - Bk 1: Addition - Bk 2: Subtraction - Bk 3: Addition & Subtraction Revision - Bk 4: Easy Multiplication & Division	The <i>10 Minutes a Day, Level 1</i> series introduces Grade 2 students to timed practice of number facts, based on a sequence of thinking strategies. Books 1 & 2 introduce timed practice of the addition and subtraction facts to 20 learned in Grade 1. These are covered at a more advanced level, with more questions per worksheet. Book 3 may be omitted if time does not allow all books to be covered in a year. It includes revising all addition and subtraction facts in sequence. Book 4 introduces Grade 2 students to multiplication and division facts, including only the easier facts using 2x, 3x, 5x and 10x.

Alignment with the UK National Curriculum for Mathematics (draft 21 June 2012)

National Curriculum for Mathematics	Recommended eBook match	Description
Year 2 Addition and subtraction Pupils should be taught to: • rapidly recall and use addition and subtraction facts to 20 Multiplication and division Pupils should be taught to: • recall multiplication and division facts for the 2, 5 and 10 multiplication tables	 Ten Minutes a Day Level 1: • Bk 1: Addition • Bk 2: Subtraction • Bk 3: Addition & Subtraction Revision • Bk 4: Easy Multiplication & Division	The <i>10 Minutes a Day, Level 1</i> series introduces Year 2 students to timed practice of number facts, based on a sequence of thinking strategies. Books 1 & 2 introduce timed practice of the addition and subtraction facts to 20 learned in Year 2. These are covered at a more advanced level, with more questions per worksheet. Book 3 may be omitted if time does not allow all books to be covered in a year. It includes all addition and subtraction facts in sequence. Teaching Strategies

Teaching Strategies Fact Sheets

The Teaching Strategies Fact Sheets provide expert information for teachers about the recommended strategy-based approach to the teaching of arithmetic facts.

Addition Number Facts - Teaching Strategies

Count On 1 Facts (+1)

Plus 1 facts are taught using a *count on* strategy: students who are familiar with the sequence of counting numbers can mentally “count on” to the next number, and name it. For example, “7” is followed by “8”.

It is important to note that children should be discouraged from counting from “1”; they need to know the sequence of number names well enough that they can start part-way along the sequence and recall the following number.

Teaching count on facts can be supported by a number line, which allows students to see the sequence of numbers and gain familiarity with the sequence.

Ten frames are also an excellent way for children to visualise the count on one strategy. With frequent use of ten frames, adding on one more is an easy step; for example:

$$7+1 = 8$$

Daily practice from a young age makes visualisation of numbers up to 10 an automatic task.

Count On 2 Facts (+2)

Plus 2 facts are also taught using a *count on* strategy: students who are familiar with the sequence of counting numbers can mentally “count on” two more numbers. For example, $4 + 2$: say “four”, skip 5, say “six”. You could have the students count, whispering the middle number (e.g., “seven, eight, nine”).

A number line will help children to visualize this operation which “skips” one number and lands on the next one:

A ten frame will also support students’ thinking. You could use a second color to add 2 counters, allowing students to subitize the starting number, the 2 added, and the sum:

Count On 3 Facts (+3)

Plus 3 facts are the “last set” taught using a *count on* strategy. Students who are quite familiar with the sequence of counting numbers can mentally “count on” three more numbers. For example, $6 + 3$: say “six”, skip 7 and 8, say “nine”. You could

have the students count, whispering the two middle numbers (e.g., “one, two, three, four”).

A number line will help children to visualize this operation which “skips” two numbers and lands on the one after:

Adding three with a ten frame or two is trickier than adding one or two, but with practice students should find this easy. As with all strategies, the aim is to move students beyond the visual or physical representations and the strategy, to being able to visualize the number, and ultimately simply knowing the fact.

Rainbow Facts (Sums to 10)

Rainbow facts are taught using a *pairs to ten* strategy: the sum of each pair of terms is 10. Students can be shown a rainbow graphic to illustrate the fact that these pairs are equidistant from the number five:

Another excellent method for visualising pairs to ten is the ten frame. Children should have practice putting a number of counters on the ten frame, and then filling the frame with counters of a second color. After some practice with this, students should be able to state the number of empty squares without using the extra counters:

Pairs to ten are foundational for many other mathematical skills, such as giving change, making this strategy very useful and relevant to everyday life.

Special Cases (+0 & +10)

Plus 0 and plus 10 facts are *special cases*. The number zero is the “additive identity”, meaning that another number is unchanged by the action of adding zero. Talk to students about having two containers of objects to combine, one of which is empty:

Adding ten to a single digit number results in the associated teen number which has one ten and the single digit number of ones. Most pairs of a single digit number and the associated teen number sound similar (e.g.,

“six” and “sixteen”). This can be illustrated easily with a pair of ten frames:

Doubles Addition Facts

Doubles number facts are taught using a *pairs* strategy. There are many examples from life which are familiar to children of items being paired. For example, people generally have 5 digits on each hand, forming a simple example of double five:

Ten frames help as well. For example, $6+6 = 12$:

Doubles + 1 (pairs of adjacent numbers)

Doubles +1 number facts are taught using a *think of doubles* strategy: once doubles are memorized, any double plus one fact is

easily found by counting on one more. Doubles plus one facts are recognized by the pairing of two numbers that are consecutive counting numbers, their sum equalling double the smaller number plus one. For example:

$$\begin{aligned} 6+7 &= \text{double } 6+1 \\ &= 12+1 \\ &= 13 \end{aligned}$$

Near Ten Facts (+9)

Plus 9 number facts are taught using a *near ten* strategy: encourage students to think of adding ten, then subtracting one. To be successful, the student needs to be familiar with teen numbers and their “ten plus some ones” common structure. The +9 strategy is easily illustrated using two ten frames and counters. Place 9 counters on the left-hand ten frame, the other number in the right-hand ten frame. The student should easily see that moving one counter from the “ones” to add to the nine makes the sum a simple “ten plus ones” question. For example:

$$9+6 = 15$$

Near Ten Facts (+8)

Plus 8 number facts are also taught using a *near ten* strategy. Students should think of adding ten, then subtracting two. The +8 strategy is easily illustrated using two ten frames and counters. For example:

$$8+5 = 13$$

Remaining facts (7+4, 7+5)

Once the previous recommended strategies have been learned, there are just two pairs of addition facts which remain, 7+4 and 7+5, and their turnaround facts. These facts can be learned as separate facts, and students can be encouraged to think of related facts that help to memorize them. For example, 7+4 is just one more than the rainbow fact 7+3.

A pair of ten frames can be used to illustrate 7+5, which will show that this sum is the same as 7+3 plus 2 more:

Check Up Tests Markbook

There are 4 or 5 Check Up Tests in this eBook. Enter students' scores and times below to keep track of their progress.

Standard Worksheets

Standard Worksheets

Standard Worksheets are designed for use by the majority of students in a regular class.

Suggested Uses:

1. Use one worksheet per day for four days a week, followed by a Check-Up sheet on the tenth day, once per two weeks. This program will take 10 weeks in total, after which the majority of students should know the arithmetic facts they have been practising.
2. Use a Checkup sheet to discover your students' strengths and weaknesses. Use a targeted approach to customize each student's program, providing each student with a selection of Standard Worksheets which match that student's needs.

Note: **Answer keys** for all worksheets are in the Answer Keys Section of this eBook.

Rainbow Facts - "Pairs to Ten" Strategy with a Ten Frame

"Rainbow facts" are pairs of numbers whose sum is 10. These facts are very important for lots of later mental computation, such as giving change.

Have students place the first number on the ten frame. Have them fill the remaining spaces with counters of a different color.

Rainbow facts

- | | |
|--------------------|---------------------|
| 1) $5 + 5 =$ _____ | 6) $9 + 1 =$ _____ |
| 2) $2 + 8 =$ _____ | 7) $5 + 5 =$ _____ |
| 3) $7 + 3 =$ _____ | 8) $10 + 0 =$ _____ |
| 4) $4 + 6 =$ _____ | 9) $6 + 4 =$ _____ |
| 5) $3 + 7 =$ _____ | 10) $8 + 2 =$ _____ |

Students can be shown a rainbow graphic to illustrate the fact that the two numbers in each pair equals 10:

Missing numbers

This worksheet is part of the Professor Pete's Classroom eBook "Ten Minutes a Day 1: Addition Worksheets". The recommended teaching sequence is shown in the bar at the top of this sheet. Rainbow facts are taught using a PAIRS TO TEN strategy: The sum of each pair of terms is 10. Students can be shown a rainbow graphic to illustrate the fact that these pairs are equidistant from the number 5. Pairs to ten are foundational for many other mathematical skills, such as giving change.

This worksheet is part of the Professor Pete's Classroom eBook "Ten Minutes a Day 1: Addition Worksheets". The recommended teaching sequence is shown in the bar at the top of this sheet. Rainbow facts are taught using a PAIRS TO TEN strategy: The sum of each pair of terms is 10. Students can be shown a rainbow graphic to illustrate the fact that these pairs are equidistant from the number 5. Pairs to ten are foundational for many other mathematical skills, such as giving change.

Plus 0 and plus 10 facts are SPECIAL CASES.

Adding zero - Talk to students about adding nothing at all to another number, which does not change.

Adding ten - Adding ten to a single digit number results in the associated teen number which has one ten and the single digit number of ones; most pairs of a single digit number and the associated teen number sound similar (eg, "six" and "sixteen"). This can be illustrated easily with a pair of ten frames.

This worksheet is part of the Professor Pete's Classroom eBook "Ten Minutes a Day 1: Addition Worksheets". Plus 0 and plus 10 facts are SPECIAL CASES. The number zero is the "additive identity", meaning that another number is unchanged by the action of adding zero. Talk to students about having two containers of objects to combine, one of which is empty. Adding ten to a single digit number results in the associated teen number which has one ten and the single digit number of ones; most pairs of a single digit number and the associated teen number sound similar (eg, "six" and "sixteen"). This can be illustrated easily with a pair of ten frames.

"Double" Strategy with Ten Frames

Have the students put out counters for the first number. Then, using a second color, put out that number again. Different arrangements for the counters can be used. Do not let students count from one. Rather, they should be able to subitize the number shown.

This worksheet is part of the Professor Pete's Classroom eBooks "Ten Minutes a Day 1: Addition Worksheets". The recommended teaching sequence is shown in the bar at the top of this sheet. Doubles number facts are taught using a PAIRS strategy: there are many examples from life which are familiar to children of items being paired. For example, the fingers on two hands are a simple example of double five.

This worksheet is part of the Professor Pete's Classroom eBooks "Ten Minutes a Day 1: Addition Worksheets". The recommended teaching sequence is shown in the bar at the top of this sheet. Doubles number facts are taught using a PAIRS strategy: there are many examples from life which are familiar to children of items being paired. For example, the fingers on two hands are a simple example of double five.

"Double +1" Strategy with Ten Frames

These number facts are taught using a THINK OF DOUBLES strategy: once doubles are memorized, any double plus one fact is easily found by counting on one more. Double plus one facts are recognized by the pairing of two numbers that are consecutive counting numbers, their sum equalling double the smaller number plus one more.

$$6+7=13$$

$$6+6+1=13$$

+9 "Near Ten" Strategy with Ten Frames

Plus 9 number facts are taught using a NEAR TEN strategy: encourage students to think of adding ten, and then subtracting one. The plus 9 strategy is easily illustrated using two ten frames and counters. Place 9 counters on the left-hand ten frame, the other number in the right-hand ten frame. The student should easily see that moving one counter from the right to the left makes the sum a simple "ten plus ones" question.

$$10 + 6 = 16$$

This worksheet is part of the Professor Pete's Classroom eBook "Ten Minutes a Day 1: Addition Worksheets". The recommended teaching sequence is shown in the bar at the top of this sheet. Plus 9 number facts are taught using a NEAR TEN strategy: encourage students to think of adding ten, then subtracting one. To be successful, the student needs to be familiar with teen numbers and their "ten plus some ones" common structure. The +9 strategy is easily illustrated using two ten frames and counters. Place 9 counters on the left-hand ten frame, the other number in the right-hand ten frame. The student should easily see that moving one counter from the right to the left makes the sum a simple "ten plus ones" question.

This worksheet is part of the Professor Pete's Classroom eBook "Ten Minutes a Day 1: Addition Worksheets". The recommended teaching sequence is shown in the bar at the top. Plus 8 number facts are taught using a NEAR TEN strategy: encourage students to think of adding ten, then subtracting two. To be successful, the student needs to be familiar with teen numbers and their "ten plus some ones" common structure. The +8 strategy is easily illustrated using two ten frames and counters. Place 8 counters on the left-hand ten frame, the other number in the right-hand ten frame. The student should easily see that moving two counters from the right to the left makes the sum a simple "ten plus ones" question.

Homework Sheets

Homework Sheets

Homework Sheets are designed to be sent home at regular intervals for home-based revision of arithmetic facts. Each sheet includes information for parents to briefly explain the learning strategy being adopted in the classroom, so that parents can offer help to their children that is consistent with what is taught at school.

Suggested Uses:

1. Use homework sheets for reinforcement of learning in class, by sending matching homework sheets home as each strategy is covered in class.
2. Introduce the program of developing fluency in arithmetic facts at a parent evening, open day, or parent-teacher interview, for example. Use the occasion to explain to parents the strategies being adopted in your classroom, and invite parents to assist their child to learn by following the Advice to Parents on each homework sheet.

Note: **Answer keys** for all worksheets are in the Answer Keys Section of this eBook.

Information for Parents: "Rainbow Facts"

Rainbow Facts - "Pairs to Ten" Strategy with a Ten Frame

"Rainbow facts" are pairs of numbers whose sum is 10. These facts are very important for lots of later mental computation, such as giving change.

Have students place the first number on the ten frame. Have them fill the remaining spaces with counters of a different colour.

Information for Parents: "Special Cases"

Plus 0 and plus 10 facts are SPECIAL CASES.

Adding zero - Talk to students about adding nothing at all to another number, which does not change.

Adding ten - Adding ten to a single digit number results in the associated teen number which has one ten and the single digit number of ones; most pairs of a single digit number and the associated teen number sound similar (eg, "six" and "sixteen"). This can be illustrated easily with a pair of ten frames.

Information for Parents: "Double" Strategy

"Double" Strategy with Ten Frames

Have the students put out counters for the first number. Then, using a second color, put out that number again. Different arrangements for the counters can be used. Do not let students count from one. Rather, they should be able to subitize the number shown.

Information for Parents: "Double +1" Strategy

"Double +1" Strategy with Ten Frames

These number facts are taught using a THINK OF DOUBLES strategy: once doubles are memorized, any double plus one fact is easily found by counting on one more. Double plus one facts are recognized by the pairing of two numbers that are consecutive counting numbers, their sum equalling double the smaller number plus one more.

$$6+7=13$$

$$6+6+1=13$$

Double +1

Information for Parents: "Near Ten" Strategy

+9 "Near Ten" Strategy with Ten Frames

Plus 9 number facts are taught using a NEAR TEN strategy: encourage students to think of adding ten, and then subtracting one. The plus 9 strategy is easily illustrated using two ten frames and counters. Place 9 counters on the left-hand ten frame, the other number in the right-hand ten frame. The student should easily see that moving one counter from the right to the left makes the sum a simple "ten plus ones" question.

$$10 + 6 = 16$$

$$9 + 6 = 16 - 1 \text{ or } 15$$

+9 (near 10)

Information for Parents: "Near Ten" Strategy

+8 "Near Ten" Strategy with Ten Frames

Plus 8 number facts are taught using a NEAR TEN strategy: encourage students to think of adding ten, and then subtracting two. The plus 8 strategy is easily illustrated using two ten frames and counters. Place 8 counters on the left-hand ten frame, the other number in the right-hand ten frame. The student should easily see that moving two counters from the right to the left makes the sum a simple "ten plus ones" question.

$$10 + 6 = 16$$

$$8 + 6 = 16 - 2 \text{ or } 14$$

+8 (near 10)

Answer Keys

Answer Keys

Answer Keys are provided for all worksheets in this eBook. Each Answer Key is identified by the title in the header of the page, which is identical to the relevant worksheet.

Suggested Uses:

1. Put the complete set of answer keys in a folder for students to take when marking their own work.
2. Display the relevant answer key on a data projector, with or without an interactive whiteboard, to display the answers to students as they mark each other's responses.

Add One - "Count On" Strategy with a Number Line

Add 1 facts are taught using a COUNT ON strategy. A number line will help children to visualize this operation in which counting on 1 lands on the next number.

Use the number line to help count on.
Do not use your fingers.

**Count on 1**

This worksheet is part of the Professor Pete's Classroom eBook "Ten Minutes a Day 1: Addition Worksheets". The recommended teaching sequence is shown in the bar at the top of this sheet. Plus 1 facts are taught using a COUNT ON strategy: Students who are familiar with the sequence of counting numbers can mentally "count on" to the next number, and name it.

Add Two - "Count On" Strategy with a Number Line

Add 2 facts are taught using a COUNT ON strategy. A number line will help children to visualize this operation which "skips" one number and lands on the next one.

Use the number line to help count on.
Do not use your fingers.

Rainbow Facts - "Pairs to Ten" Strategy with a Ten Frame

"Rainbow facts" are pairs of numbers whose sum is 10. These facts are very important for lots of later mental computation, such as giving change.

Have students place the first number on the ten frame. Have them fill the remaining spaces with counters of a different color.

**Rainbow facts**

- | | |
|-----------------|------------------|
| 1) $5 + 5 = 10$ | 6) $9 + 1 = 10$ |
| 2) $2 + 8 = 10$ | 7) $5 + 5 = 10$ |
| 3) $7 + 3 = 10$ | 8) $10 + 0 = 10$ |
| 4) $4 + 6 = 10$ | 9) $6 + 4 = 10$ |
| 5) $3 + 7 = 10$ | 10) $8 + 2 = 10$ |

Students can be shown a rainbow graphic to illustrate the fact that the two numbers in each pair equals 10:

This worksheet is part of the Professor Pete's Classroom eBook "Ten Minutes a Day 1: Addition Worksheets". The recommended teaching sequence is shown in the bar at the top of this sheet. Rainbow facts are taught using a PAIRS TO TEN strategy: The sum of each pair of terms is 10. Students can be shown a rainbow graphic to illustrate the fact that these pairs are equidistant from the number 5. Pairs to ten are foundational for many other mathematical skills, such as giving change.

---	---	---	---	------	------	------	--------	---	---	-----

Plus 0 and plus 10 facts are SPECIAL CASES.

Adding zero - Talk to students about adding nothing at all to another number, which does not change.

Adding ten - Adding ten to a single digit number results in the associated teen number which has one ten and the single digit number of ones; most pairs of a single digit number and the associated teen number sound similar (eg, "six" and "sixteen"). This can be illustrated easily with a pair of ten frames.

This worksheet is part of the Professor Pete's Classroom eBook "Ten Minutes a Day 1: Addition Worksheets". Plus 0 and plus 10 facts are SPECIAL CASES. The number zero is the "additive identity", meaning that another number is unchanged by the action of adding zero. Talk to students about having two containers of objects to combine, one of which is empty. Adding ten to a single digit number results in the associated teen number which has one ten and the single digit number of ones; most pairs of a single digit number and the associated teen number sound similar (eg, "six" and "sixteen"). This can be illustrated easily with a pair of ten frames.

"Double" Strategy with Ten Frames

Have the students put out counters for the first number. Then, using a second color, put out that number again. Different arrangements for the counters can be used. Do not let students count from one. Rather, they should be able to subitize the number shown.

This worksheet is part of the Professor Pete's Classroom eBooks "Ten Minutes a Day 1: Addition Worksheets". The recommended teaching sequence is shown in the bar at the top of this sheet. Doubles number facts are taught using a PAIRS strategy: there are many examples from life which are familiar to children of items being paired. For example, the fingers on two hands are a simple example of double five.

This worksheet is part of the Professor Pete's Classroom eBooks "Ten Minutes a Day 1: Addition Worksheets". The recommended teaching sequence is shown in the bar at the top of this sheet. Doubles number facts are taught using a PAIRS strategy: there are many examples from life which are familiar to children of items being paired. For example, the fingers on two hands are a simple example of double five.

"Double +1" Strategy with Ten Frames

These number facts are taught using a THINK OF DOUBLES strategy: once doubles are memorized, any double plus one fact is easily found by counting on one more. Double plus one facts are recognized by the pairing of two numbers that are consecutive counting numbers, their sum equalling double the smaller number plus one more.

$$6+7=13$$

$$6+6+1=13$$

Double +1

This worksheet is part of the Professor Pete's Classroom eBook "Ten Minutes a Day 1: Addition Worksheets". The recommended teaching sequence is shown in the bar at the top of this sheet. Doubles +1 number facts are taught using a THINK OF DOUBLES strategy: once doubles are memorized, any double plus one fact is easily found by counting on one more. Doubles plus one facts are recognized by the pairing of two numbers that are consecutive counting numbers, their sum equalling double the smaller number plus one more.

+9 "Near Ten" Strategy with Ten Frames

Plus 9 number facts are taught using a NEAR TEN strategy: encourage students to think of adding ten, and then subtracting one. The plus 9 strategy is easily illustrated using two ten frames and counters. Place 9 counters on the left-hand ten frame, the other number in the right-hand ten frame. The student should easily see that moving one counter from the right to the left makes the sum a simple "ten plus ones" question.

$$10 + 6 = 16$$

$$9 + 6 = 16 - 1 \text{ or } 15$$

This worksheet is part of the Professor Pete's Classroom eBook "Ten Minutes a Day 1: Addition Worksheets". The recommended teaching sequence is shown in the bar at the top of this sheet. Plus 9 number facts are taught using a NEAR TEN strategy: encourage students to think of adding ten, then subtracting one. To be successful, the student needs to be familiar with teen numbers and their "ten plus some ones" common structure. The +9 strategy is easily illustrated using two ten frames and counters. Place 9 counters on the left-hand ten frame, the other number in the right-hand ten frame. The student should easily see that moving one counter from the right to the left makes the sum a simple "ten plus ones" question.

This worksheet is part of the Professor Pete's Classroom eBook "Ten Minutes a Day 1: Addition Worksheets". The recommended teaching sequence is shown in the bar at the top. Plus 8 number facts are taught using a NEAR TEN strategy: encourage students to think of adding ten, then subtracting two. To be successful, the student needs to be familiar with teen numbers and their "ten plus some ones" common structure. The +8 strategy is easily illustrated using two ten frames and counters. Place 8 counters on the left-hand ten frame, the other number in the right-hand ten frame. The student should easily see that moving two counters from the right to the left makes the sum a simple "ten plus ones" question.

Information for Parents: "Count On" Strategy

Add One - "Count On" Strategy with a Number Line

Add 1 facts are taught using a COUNT ON strategy. A number line will help children to visualize this operation in which counting on 1 lands on the next number.

Use the number line to help count on.
Do not use your fingers.

Count on 1

- | | |
|-------------------|-----------------|
| 1) $3 + 1 = 4$ | 16) $1 + 1 = 2$ |

Information for Parents: "Rainbow Facts"

Rainbow Facts - "Pairs to Ten" Strategy with a Ten Frame

"Rainbow facts" are pairs of numbers whose sum is 10. These facts are very important for lots of later mental computation, such as giving change.

Have students place the first number on the ten frame. Have them fill the remaining spaces with counters of a different colour.

Rainbow facts

- | | |
|-----------------|-------------------|
| 1) $9 + 1 = 10$ | 6) $2 + 8 = 10$ |
| 2) $4 + 6 = 10$ | 7) $5 + 5 = 10$ |
| 3) $3 + 7 = 10$ | 8) $7 + 3 = 10$ |
| 4) $8 + 2 = 10$ | 9) $5 + 5 = 10$ |
| 5) $6 + 4 = 10$ | 10) $10 + 0 = 10$ |

Students can be shown a rainbow graphic to illustrate the fact that the two numbers in each pair equals 10:

Missing numbers

- | | | | |
|-------------------|-------------------|-------------------|-------------------|
| 11) $1 + 9 = 10$ | 26) $7 + 3 = 10$ | 41) $0 + 10 = 10$ | 56) $2 + 8 = 10$ |
| 12) $10 + 0 = 10$ | 27) $7 + 3 = 10$ | 42) $8 + 2 = 10$ | 57) $5 + 5 = 10$ |
| 13) $3 + 7 = 10$ | 28) $8 + 2 = 10$ | 43) $10 + 0 = 10$ | 58) $7 + 3 = 10$ |
| 14) $10 + 0 = 10$ | 29) $2 + 8 = 10$ | 44) $9 + 1 = 10$ | 59) $1 + 9 = 10$ |
| 15) $0 + 10 = 10$ | 30) $8 + 2 = 10$ | 45) $0 + 10 = 10$ | 60) $9 + 1 = 10$ |

Special Cases (+0, +10): 5 [A]

+ 1 2 3 Rnbw 0&10 Dble Dble+1 9 8 All

Information for Parents: "Special Cases"

Plus 0 and plus 10 facts are SPECIAL CASES.

Adding zero - Talk to students about adding nothing at all to another number, which does not change.

Adding ten - Adding ten to a single digit number results in the associated teen number which has one ten and the single digit number of ones; most pairs of a single digit number and the associated teen number sound similar (eg, "six" and "sixteen"). This can be illustrated easily with a pair of ten frames.

Add 0 & 10

Information for Parents: "Double" Strategy

"Double" Strategy with Ten Frames

Have the students put out counters for the first number. Then, using a second color, put out that number again. Different arrangements for the counters can be used. Do not let students count from one. Rather, they should be able to subitize the number shown.

Double

Information for Parents: "Double +1" Strategy

"Double +1" Strategy with Ten Frames

These number facts are taught using a THINK OF DOUBLES strategy: once doubles are memorized, any double plus one fact is easily found by counting on one more. Double plus one facts are recognized by the pairing of two numbers that are consecutive counting numbers, their sum equalling double the smaller number plus one more.

$$6+7=13$$

$$6+6+1=13$$

Double +1

Information for Parents: "Near Ten" Strategy

+9 "Near Ten" Strategy with Ten Frames

Plus 9 number facts are taught using a NEAR TEN strategy: encourage students to think of adding ten, and then subtracting one. The plus 9 strategy is easily illustrated using two ten frames and counters. Place 9 counters on the left-hand ten frame, the other number in the right-hand ten frame. The student should easily see that moving one counter from the right to the left makes the sum a simple "ten plus ones" question.

$$10 + 6 = 16$$

$$9 + 6 = 16 - 1 \text{ or } 15$$

+9 (near 10)

Information for Parents: "Near Ten" Strategy

+8 "Near Ten" Strategy with Ten Frames

Plus 8 number facts are taught using a NEAR TEN strategy: encourage students to think of adding ten, and then subtracting two. The plus 8 strategy is easily illustrated using two ten frames and counters. Place 8 counters on the left-hand ten frame, the other number in the right-hand ten frame. The student should easily see that moving two counters from the right to the left makes the sum a simple "ten plus ones" question.

$$10 + 6 = 16$$

$$8 + 6 = 16 - 2 \text{ or } 14$$

+8 (near 10)

- | | |
|-------------------|-------------------|
| 1) $9 + 10 = 19$ | 21) $5 + 10 = 15$ |
| 2) $9 + 8 = 17$ | 22) $5 + 8 = 13$ |
